Steam Quality Meter

Unique steam quality meter with two proven technologies provides accurate measurement of steam and steam quality. The meter produces a reliable steam quality (dryness) measurement and steam mass flow rate reading in saturated steam service. It can also measure real-time steam quality in homogenous steam flow.

- Provide fluid density, volume, and mass flow measurement
- Predicts gas volume flow without knowing fluid density
- Provide a reliable steam quality (steam dryness)
- Calculate density of changing gas mixtures
- Measure homogenous flow (both volume and density)
- Mass flow equations for additional diagnostic information and verification
- Reduces initial cost, installation cost and cost-of ownership over the lifetime of the instrument
- Easy to install and commission

- Application programming interfaces (APIs)
- Billing and metering of service usage in a pay-as-you-go model
- Performance monitoring and measuring
- Security

Wet Gas

Wet gas flow is defined as a gas flow contains a small amount of liquid. It is an adverse flow condition for all flow meters and incorporates a wide range of flow conditions, where different operators require different wet gas meter capabilities. Tek-Trol's Wet Gas Metering range is uniquely positioned to provide the operator with the optimum solution for wet-gas flow measurement, which is significantly more complicated than measuring the single-phase gas flow.

- Operator friendly
- Low maintenance
- Predict liquid loading value
- Uses wet gas correction algorithm
- Simple and robust
